

GALVALUME

Union's 30 year warranty against substrate rust and corrosion is the best in the industry. Our standard products feature a 55% Aluminum – Zinc coating known as Galvalume which has been proven to be the technological leader for long-term durability. This proprietary coating is composed of 55% Aluminum, 43.5% Zinc, and 1.5% Silicon. Studies have shown that Galvalume coatings inhibit corrosion up to four times better than Galvanized G-90. These coatings combine the sacrificial (galvanic) benefits of Zinc, with the barrier protection of Aluminum.

Comparison of drip edge corrosion on a 20 year old building in severe acid rain environment, Pennsylvania.

Comparison of corrosion on a scratch site on 20 year old building in Ontario, Canada.
